

HTTP API object "animalsExports"

Examples

Action getExports

Get a list of the available animal exports.

```
$data = array(  
    "token" => $token,  
    "tokenHash" => $tokenHash,  
    "objectType" => "animalsExports",  
    "objectAction" => "getExports",  
);
```

Action updateExports

Update animal exports to disable one of the exports.

```
$data = array(  
    "token" => $token,  
    "tokenHash" => $tokenHash,  
    "objectType" => "animalsExports",  
    "objectAction" => "updateExports",  
    "values" => array(  
        array(  
            "exportID" => "1019",  
            "exportEnabled" => "No",  
        ),  
    ),  
);
```
