

HTTP API object "events"

On this page:

- [Examples](#)
 - [Action add](#)
 - [Action edit](#)
 - [Action publicSearch](#)
 - [Action publicView](#)

Examples

Action add

```
$data = array(
    "token" => $token,
    "tokenHash" => $tokenHash,
    "objectType" => "events",
    "objectAction" => "add",
    "values" => array(
        array(
            "eventName" => "add event during test",
            "eventLocationID" => $validLocation,
            "eventStart" => "5/1/2012 13:00",
            "eventEnd" => "5/1/2012 15:00",
            "eventUrl" => "http://yahoo.com",
            "eventDescription" => "Here's the description for this event.",
            "eventSpecies" => array("Dog", "Cat"),
        ),
    ),
);
```

Action edit

```
$data = array(
    "token" => $token,
    "tokenHash" => $tokenHash,
    "objectType" => "events",
    "objectAction" => "edit",
    "values" => array(
        array(
            "eventID" => $validPK,
            "eventName" => "edit event during test",
            "eventLocationID" => $validLocation,
            "eventStart" => "5/1/2012 13:00",
            "eventEnd" => "5/1/2012 15:00",
            "eventUrl" => "http://yahoo.com",
            "eventDescription" => "Here's the description for this event.",
            "eventSpecies" => array("Dog", "Cat"),
        ),
    ),
);
```

Action publicSearch

```

$data = array(
    "apikey" => $publicApiKey,
    "objectType" => "events",
    "objectAction" => "publicSearch",
    "search" => array (
        "resultStart" => 0,
        "resultLimit" => 10,
        "resultSort" => "eventEnd",
        "resultOrder" => "desc",
        "calcFoundRows" => "Yes",
        "filters" => array(
            array(
                "fieldName" => "eventSpecies",
                "operation" => "equals",
                "criteria" => "dog",
            ),
            array(
                "fieldName" => "eventStart",
                "operation" => "greaterthanorequal",
                "criteria" => "rg:today",
            ),
        ),
        "fields" => array("eventID","eventOrgID","eventName","eventStart"),
    ),
);

```

Action publicView

```

$data = array(
    "apikey" => $publicApiKey,
    "objectType" => "events",
    "objectAction" => "publicView",
    "values" => array (
        array("eventID" => "5"),
    ),
    "fields" => array("eventID")
);

```
