

# HTTP API object "users"

## Examples

 The getSettings and updateSettings actions are explained in the [common actions article](#) and are not duplicated here.

### Action add

```
$data = array(
    "token" => $token,
    "tokenHash" => $tokenHash,
    "objectType" => "users",
    "objectAction" => "add",
    "values" => array(
        array(
            "userLogin" => "testingUserName",
            "userPassword" => "abc123",
            "userFirstname" => "test",
            "userLastname" => "user via api",
            "userEmail" => "testuser@yahoo.com",
            "userContactID" => "2000131",
            "userType" => "Website",
        ),
    ),
);
```

### Action edit

```
$data = array(
    "token" => $token,
    "tokenHash" => $tokenHash,
    "objectType" => "users",
    "objectAction" => "edit",
    "values" => array(
        array(
            "userID" => "9876",
            "userLogin" => "testingEditUserName",
            "userEmail" => "testuser@yahoo.com",
        ),
    ),
);
```
