

# \_Importing\_animal\_data\_from\_iShelters\_Intro\_v1

[iShelters](#) is one of several rescue and shelter software packages which uploads adoptable animal data to [RescueGroups.org](#).

We are very happy to say that many providers are committed to helping the community just as we do at [RescueGroups.org](#). If the service you are currently using isn't doing everything they could to help you and your animals, please consider switching to one of the [community-focused companies](#) that are working with the rescue community.
