_About_the_audit_log_Content_v1

The **Audit Log** feature captures many actions that users take while working in your RescueGroups.org account. Currently, not all actions are recorded in the Audit Log. For example, if a bulk action is taken on a data table list (such as changing the status of multiple animals) that would not be recorded here.

The Audit Log is displayed in a data table, and you can manipulate the data as you can when using any of the other data tables in your account. For more information about data tables, see the chapter How information is organized in your account.

You can change the view for the information in this data table, export it to a spreadsheet, or sort it by any of the headings. This table is useful for determining what tasks have been completed and by which volunteer, or for determining workload for a particular volunteer.
