

# Creating a custom data table view Intro\_v1

By creating a **custom data table view** you can decide what information is displayed in that data table.

You can control the following by using a custom view:

- Fields to be included in the view
- Sort field and sort order of the records
- Filters that control which records are included
- Any sharing that's done with your fellow volunteers

## Where do I find it?

You can **create a custom data table view** for any data table in the RescueGroups.org services.

Just go to a data table like the [Animals](#) page (**Animals > Animal List**) and click the **Add a datatable view** button.
