Creating_a_custom_data_table_view_Intro_v1

By creating a custom data table view you can decide what information is displayed in that data table.

You can control the following by using a custom view:

- Fields to be included in the view
- Sort field and sort order of the records
- Filters that control which records are included
- Any sharing that's done with your fellow volunteers

Where do I find it?

You can create a custom data table view for any data table in the RescueGroups.org services.

Just go to a data table like the Animals page (Animals > Animal List) and click the Add a datatable view button.
