# _Using_browser_tabs_to_view_web_page_changes_Content_v1

Using the tabs to make changes and then view them

Now we have two tabs open, one with your account interface, the other with your website.

- Click on the tab with your website to make it the active tab.
- Click on the refresh icon to view your changes you've made.

Now when you edit your web pages from your account, you can switch over to the other tab that has your website, tap the refresh button or use F5 and view your changes.
