

_Using_a_Google_web_font_Content_v1

Getting a link to a Google Web Font

Google publishes a catalog of open source designer web fonts which are relatively easy to download and use on your website.

In this example, we will use the font Dancing Script and apply it to our Heading 2 (H2) tag.

1. To view Google Fonts, go to <https://fonts.google.com/>
2. Choose your font(s) and select your styles.
3. For your Selected families, click **Embed** and copy the **Link** code they provide

For example:

```
<link href='http://fonts.googleapis.com/css?family=Dancing+Script' rel='stylesheet' type='text/css'>
```

Adding the font code to your website

1. Go to **Website > HTML Head**, click **Edit**
2. Next to Page Header HTML, paste the embed link you copied from Google.
3. Click **Save Website Header and Footer**
4. Go to [RescueGroups.org](https://rescuegroups.org) and click **Login**, once logged in go to **Website > Custom CSS**

Example:

```
/* Applies formatting for Heading 2*/

h2 {
margin: 0 0 15px 10px;
font-family: 'Dancing Script', serif;
font-size: 41px;
font-style: normal;
font-weight: 400;
text-decoration: none;
text-transform: none;
letter-spacing: 0.061em;
word-spacing: 0.115em;
line-height: 1.11;
}
```
